

## Seascape's Installation Hanger

Comes with each pendant canopy for all lamps less than 42" in diameter. This assembly allows for an installer to have both hands free to "makeup" their wire. Once the supplied universal or regular bracket bar is attached to the junction box, a (400# test) 1/16" aircraft cable with a ball on one end and a loop on the other is slipped around bracket and hooked to keyhole at nipple on canopy. Once the wiring is completed this hanger can stay attached and live inside canopy for fixture removal.

(For round or rectangular canopies.)
